

STAFF ENGINEER - ANDROID APPLICATION
Location: Palo Alto (California) or Bangalore (India)
Reference Code: REF029

Founded in 2014, Simless is a digital SIM card technology startup company. We provide cellular connectivity solutions to mobile operators, device manufacturers and subscribers. Our mission is to simplify the way billions of people and objects around the world access cellular networks. We believe that the digitization of physical SIM cards represents the first major step towards achieving this mission.

As a Staff Engineer, you will have the opportunity to grow your skills by working on cutting-edge technologies that will change the world of telecommunications.

Responsibilities

- Develop, test, deploy, maintain and improve Android Applications.
- Manage individual project priorities, deadlines and deliverables.

Qualifications

- BA/BS degree in Computer Science or relevant technical field
- 7 years of relevant work experience in software development.
- 5 years of Android application development experience.
- Expert knowledge of Android services, Activity and Fragment life cycle
- Expert knowledge of UI development, Android themes and styles
- Expert knowledge of REST client using JSON with Retrofit2
- Expert knowledge of Android data providers, Room preferred
- Expert knowledge of Junit Android tests and Espresso
- Knowledge of AIDL programming interfaces
- Knowledge of building and deploying Android applications with Jenkins
- Experience in building native libraries using Android NDK
- Knowledge of SIM technology, ETSI and GSMA specifications is a big plus
